

THE APPLICATION OF INVISIBLE SPEAKER AND THE METHOD FOR FABRICATING THE SAME

ABSTRACT OF THE DISCLOSURE

5 An invisible speaker applied in an electric equipment is disclosed.
The invisible speaker includes a transparent device disposed on a body
of the electric equipment and having a transparent portion for a vision
face of the electric equipment, wherein the transparent device is a
distributed acoustic radiator for sending out a sound, and a first
10 transducer connected to the transparent device for vibrating the
transparent device to send out the sound.
